# DIETZGEN'S RAILROAD CURVE AND REDUCTION TABLES

Copyright, 1914, by Eugene Dietzgen Co., New York City

## CURVE FORMULAS

Radius= $R = \frac{50}{\sin \frac{D}{2}}$  (1) Degree of Curve= $D$  and  $\sin \frac{D}{2} = \frac{60}{R}$  (2)

Tangent= $T = R \tan \frac{\Delta}{2}$  (3) Length of Curve= $L = 100 \frac{\Delta}{D}$  (4)

Middle ordinate= $M = R(1 - \cos \frac{\Delta}{2})$  (5)  $= R \text{vers} \frac{\Delta}{2}$  (6)

External= $E = T \tan \frac{\Delta}{4} - R = R \div \cos \frac{\Delta}{2} - R$  (8)  $= R \text{exsec} \frac{\Delta}{2}$  (9)

Long Chord= $C = 2 R \sin \frac{\Delta}{2}$  (10)  $\Delta =$  Central Angle

## EXPLANATION AND USE OF TABLES

**Stations.**—Given P. I.—Sta. 161+60.35 to find Sta. of P. C. and P. T.  $\Delta = 62^{\circ}10'$   $D = 8^{\circ}20'$ . From Table IV for  $1^{\circ}$  curve  $T = 3454.1$  and  $+8\frac{1}{2} = 414.49$  ft. From Table V correction  $= .36$  or  $T = 414.85$  ft. P. C.—Sta. P. I.— $T = 157+45.50$ . Also from (4)  $L = 746.00$  and P. T.—Sta. P. C.  $+L = 164+91.50$ .

**Offsets.**—Tangent offsets vary (approximately) directly with  $D$  and with square of the distance. Thus tangent offset for Sta. 158 on above curve is 2.16 ft. found as follows. From Table III tangent offset for 100 ft.  $= 7.27$  ft. Distance  $= 158 - \text{Sta. P. C.} = 54.50$ , hence offset  $= 7.27 (54.50 \div 100)^2 = 2.16$  ft. Also square of any distance divided by twice the radius equals (approximately) the distance from tangent to curve. Thus  $(54.50)^2 \div (2 \times 688.26) = 2.16$  ft.

**Deflections.**—Deflection angle  $= \frac{1}{2} D$  for 100 ft.,  $\frac{1}{4} D$  for 50 ft., etc. For  $c$  ft.  $= (n \text{ minutes}) .3 \times C \times D^{\circ}$  or  $=$  defl. for 1 ft. from Table III  $\times C$ . For Sta. 158 of above curve  $= .3 \times 54.5 \times 8\frac{1}{2} = 136.2'$  or  $2^{\circ}16.2'$ , or  $= 2.50 \times 54.5 = 136.2'$  from Table III. For Sta. 159 deflection angle  $= 2^{\circ}16.2' + 8^{\circ}20' \div 2 = 6^{\circ}26.2'$ , etc.

**Externals.**—May be found in similar manner to tangents. Thus  $E$  for curve above is 91.37. For from Table IV for  $1^{\circ}$  curve  $E = 960.6$  for  $8^{\circ}20' = 360.6 \div 8\frac{1}{2} = 91.27$  and from Table V correction  $= .10$  or  $E = 91.37$  ft. Or suppose  $\Delta = 32^{\circ}$  and  $E$  is measured and found to be 42 ft. What is  $D$ ? From Table IV  $E = 230.9$  and  $+42 = 5.5$  or  $D = 5^{\circ}30'$ .
